

RCP Pharm Annual Conference 2026 Abstract Template (500 words)

State your research title clearly here in Arial, size 12, bold, and left-aligned

First Name, Last Name¹, First Name, Last Name², First Name, Last Name³

¹ *Institution or School or Company Name, Street Name, City Name, Country Name*

² *Institution or School or Company Name, Street Name, City Name, Country Name*

³ *Institution or School or Company Name, Street Name, City Name, Country Name*

Introduction

Provide brief context and the problem/gap your work addresses. Explain why it matters to pharmacy practice, pharmaceutical science, industry, policy, or patients. End with one sentence stating what is currently unknown/insufficient and why your work is needed.

Aim

State one clear aim or primary research question. If needed, add 1–2 secondary objectives. Do not use bullet points.

Methodology

Describe the study design and setting (e.g., service evaluation, observational study, laboratory experiment, qualitative study, mixed methods). Specify: who/what was studied (population/sample/material), where and when (timeframe), inclusion/exclusion criteria (if applicable), data sources or materials, outcomes/measures, and analysis approach (statistical tests or qualitative framework). Include governance/ethics route briefly if relevant (e.g., ethics approval reference or service evaluation/QI governance). Keep this section concise but sufficiently detailed to interpret the results.

Results

Report the key findings only. Include numbers with denominators (e.g., n/N, %, mean ± SD, median [IQR]) and relevant timeframes. For qualitative studies, summarise main themes with brief supporting detail. Do not introduce new methods here. Avoid conclusions that are not supported by the results.

Discussion

Interpret what the results mean and why they matter. Link back to the aim. Explain the main implication for practice/science/industry/policy. Include limitations (e.g., sample size, single site, short follow-up, potential bias). End with a practical next step or recommendation (e.g., scale-up, further evaluation, implementation considerations). Do not overclaim causality if the design does not support it.

Keywords

Write up to five keywords, separated by commas. Use terms that improve searchability and match the track topic (e.g., Medicines safety, pharmacovigilance, formulation, implementation, workforce).

References

1. Provide three references in Vancouver style (3 maximum)

RCP Pharm Annual Conference 2026 Abstract Template (500 words)

Layout – Default (Normal – Top, bottom, left, right = 2.54 cm)

Title – Arial, size 12, bold, and left-aligned

Author list – Arial and size 10

Affiliation list – Arial, size 10, and italic

Headings – Arial, size 12, bold, and underline
